Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2026-27

Course Information	
Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second year M. Tech., Semester III
Course Code	7ST691
Course Name	Dissertation Phase - I
Desired Requisites:	Courses of Semester I and II of F. Y. M. Tech (Civil - Structural Engineering)

Teaching Scheme		**Examination Scheme (Marks)**			
Practical	24 Hrs/week	**LA1**	**LA2**	**ESE**	**Total**
		30	30	40	100
		Credits: 12			

Course Objectives	
1	To impart knowledge for establishing objectives by carrying out extensive literature review on selected dissertation topics.
2	To develop methodology to execute the proposed research work through analytical/experimental work.
3	To analyse, interpret, debate, and classify the findings of the work.

Course Outcomes (CO) with Bloom's Taxonomy Level		
At the end of the course, the students will be able to,		
CO1	**Execute** detailed literature survey to understand research developments and set up research hypotheses.	Applying
CO2	**Construct** research methodology to evaluate the research hypothesis.	Analysing
CO3	**Assess** research idea with perspective scope.	Evaluating
CO4	**Devise** the research objectives to solve the given problem formulated through literature study.	Creating

Contents

The dissertation work will start in semester III, and should involve scientific research, design, collection, and analysis of data, determining solutions and must bring out the individual's contribution. Dissertation Phase 1 will have presentation and report submission (synopsis). The presentation will include identification of the research problem based on the extensive literature review on the topic referring to latest literature available, defining objectives of the work, and the methodology to be adopted.

CO-PO Mapping

	Programme Outcomes (PO)					
	1	**2**	**3**	**4**	**5**	**6**
CO1	3		2	2		3
CO2	2	3	2	2		3
CO3			2		2	
CO4	3		2	3		3

The strength of mapping is to be written as 1: Low, 2: Medium, 3: High Each CO of the course must map to at least one PO.

Assessment				
There are three components of lab assessment, LA1, LA2 and Lab ESE. IMP: Lab ESE is a separate head of passing (min 40 %), LA1+LA2 should be min 40%				
Assessment	**Based on**	**Conducted by**	**Typical Schedule**	**Marks**
LA1	Lab activities, attendance, journal	Lab Course Faculty	During Week 1 to Week 8 Marks Submission at the end of Week 8	30
LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 9 to Week 16 Marks Submission at the end of Week 16	30
Lab ESE	Lab activities, journal/ performance	Lab Course Faculty and External Examiner as applicable	During Week 18 to Week 19 Marks Submission at the end of Week 19	40
Week 1 indicates starting week of a semester. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming, and other suitable activities, as per the nature and requirement of the lab course.				

Prepared by Mr. A. S. Patane	DAC/BoS Secretary	Head/BoS Chairman

AY 2026-27

Course Information	
Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second year M. Tech., Sem. III
Course Code	7ST612
Course Name	NPTEL Course – Bridge Engineering
Desired Requisites:	Structural Analysis, Solid Mechanics, Design of Concrete Structure, Design of Steel Structure

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	3 Hrs./week	**MSE**	**ISE**	**ESE**	**Total**
		30	20	50	100
		Credits: 3			

Course Objectives	
1	To provide knowledge of loads and analysis for different types of bridges.
2	To impart knowledge for design of different types of bridges including substructures with relevant codes.
3	To provide knowledge for construction, inspection and maintenance of bridges.

Course Outcomes (CO) with Bloom's Taxonomy Level		
At the end of the course, the students will be able to,		
CO1	**Understand** the different types of bridges, its importance and selection.	Understanding
CO2	**Illustrate** components of bridges and its necessity based on various types of bridges.	Applying
CO3	**Analyze** various types of bridges with appropriate loads and methods.	Analyzing
CO4	**Estimate** the stresses in the bridge components and decide the reinforcement details.	Evaluating
CO5	**Design** the components of bridges and bearings following all safety measures.	Creating
CO6	**Propose** various techniques of construction, maintenance and rehabilitation of bridges considering serviceability during its lifetime.	Creating

Module	**Module Contents**	**Hours**
I	Introduction Reinforced concrete slab bridge decks	6
II	RC culverts, Pipe culvert, Box culvert Steel truss bridges	6
III	Plate girder bridges Arch bridges, Suspension bridges, Cable stayed bridges, Balanced cantilever bridges	7
IV	Prestressed concrete bridges and Composite bridges Rigid Frame Bridges and Continuous Girder Bridges	7
V	Piers, Abutments, and Foundation Bridge bearings, Joints and Appurtenances.	7
VI	Construction, Maintenance and Rehabilitation of bridges Advanced topics in bridge engineering	6

CO-PO Mapping						
	Programme Outcomes (PO)					
	1	**2**	**3**	**4**	**5**	**6**
CO1	1	2	2		1	
CO2		2	3	2		
CO3	1			3		
CO4				2		3
CO5	2				3	3
CO6		2	3		2	3
The strength of mapping is to be written as 1: Low, 2: Medium, 3: High Each CO of the course must map to at least one PO.						

Assessment
The assessment is based on MSE, ISE and ESE. MSE shall be typically on modules 1 to 3. ISE shall be taken throughout the semester in the form of teacher’s assessment. Mode of assessment can be field visit, assignments etc. and is expected to map at least one higher order PO. ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6. For passing a theory course, Min. 40% marks in (MSE + ISE + ESE) are needed and Min. 40% marks in ESE are needed. (ESE shall be a separate head of passing)

Prepared by Dr. P. K. Sohoni	DAC/BoS Secretary	Head/BoS Chairman

(Government Aided Autonomous Institute)

AY 2026-27

Course Information	
Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second Year M. Tech, Sem III
Course Code	7ST613
Course Name	NPTEL Course - Computer Methods of Structural Analysis of Offshore Structures
Desired Requisites:	Structural Analysis, Structural Dynamics

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	3 Hrs/week	**MSE**	**ISE**	**ESE**	**Total**
		30	20	50	100
		Credits: 3			

Course Objectives	
1	To give an understanding to computer aided design process which includes mathematical representation offshore structures, Engineering Optimisation and Database systems.
2	To identify types of offshore structure and its advantages.
3	To enhance knowledge and skills in offshore structure analysis with modern computer methods.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	**Course Outcome Statement/s**	**Bloom's Taxonomy Levels**	**Bloom's Taxonomy Description**
CO1	**Examine** the indeterminacy of 2D 3D frames and structures.	III	Applying
CO2	**Discover** various types of offshore structures, based on functional applications and advantages.	III	Applying
CO3	**Analyse** the Planar orthogonal and non-orthogonal structures using stiffness method.	IV	Analysing
CO4	**Illustrate** the deflections in planar truss systems using stiffness method.	IV	Analysing
CO5	**Evaluate** the seismic performance of offshore structure using response spectrum.	V	Evaluating
CO6	**Solve** the numerical on dynamic analysis of offshore structures with consideration of fatigue loads.	VI	Creating

Module	**Module Contents**	**Hours**
I	Indeterminate structures, Space frames	6
II	Stiffness method: Planar orthogonal structures, Stiffness method: Planar non-orthogonal structures	8
III	Stiffness method: Planar truss systems, Stiffness method: 3D analysis	6
IV	Types of offshore structures, New-generation offshore platforms	6
V	Environmental loads, Dynamic analysis, Response spectrum	7
VI	Analysis under fatigue loads, Random process	6

Course Information

Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second Year M. Tech, Sem III
Course Code	7ST614
Course Name	NPTEL Course - Introduction to Engineering Seismology
Desired Requisites:	Earthquake Engineering

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	3 Hrs/week	**MSE**	**ISE**	**ESE**	**Total**
		30	20	50	100
		Credits: 3			

Course Objectives

1	To explain the principles of plate tectonics and their correlation with seismic activity, including the identification of plate boundaries and their impact on earthquake occurrences
2	To apply knowledge of seismic wave characteristics to interpret seismic records accurately, thereby assessing earthquake intensity, magnitude, and energy release
3	To apply methodologies to estimate seismic hazard parameters, such as seismic zonation, attenuation relations, and recurrence relations, enabling effective assessment of earthquake risk in specific regions

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO1	**Understand** the concept of plate tectonics and its relation to seismic activity	Understanding
CO2	**Apply** knowledge of seismic wave characteristics to interpret earthquake intensity and magnitude	Applying
CO3	**Interpret** seismic records effectively using earthquake instrumentation.	Applying
CO4	**Apply** predictive models to estimate seismic hazard parameters for specific regions.	Applying
CO5	**Create** tectonic maps using earthquake catalogue data and understand their significance in assessing seismic hazard	Creating
CO6	**Analyse** seismic hazard using deterministic and probabilistic methods, integrating rupture-based approaches and case studies	Analysing

Module	**Module Contents**	**Hours**
I	**Earthquake Hazard and Basic Seismology** Introduction to earthquake hazards- Global seismicity and Seismic risk, History of Engineering Seismology and Earthquake types. Elastic Rebound Theory; Earthquake sources; Plate tectonics, and Plate Boundaries: Continental Drift	6
II	**Seismic Waves and Energy** Theory of Wave Propagation Seismic wave propagation, Types of seismic waves, Wave characteristics and Shadow zones Concept of Earthquake Measurement, Seismic Intensity and Magnitudes Scales, Past earthquake Energy and Comparable Explosive tests	6
III	**Earthquake Instrumentation** Earthquake Instruments, Sensors and Data Loggers, Mechanical and Digital sensors; Seismic Station, Interpretation of Seismic Records: Identification of made events and natural earthquake; Time and frequency domain characteristic of ground motion	6
IV	**Seismic Zonation and Predictive Models** Regional Seismicity, Earthquakes in India and Most Important Global	6

	Earthquakes; Concept of Seismic Zonation and Methodology for Seismic micro-zonation, Predictive Models in Earthquake Engineering- Attenuation Relation; Intensity, Duration and Ground Motion Predictive Relations	
V	**Seismotectonic Maps** Earthquake Catalog preparation, Source Map preparation; Homogenization and Declustering of earthquake data and preparation of Seismotectonic maps Seismic Hazard Parameters: a and b values, Recurrence relations and Maximum magnitude: Region Specific Approach for estimation Parameters and Selection of predictive equations	7
VI	**Seismic Hazard Analysis** Deterministic and Probabilistic Methods; Rupture based approach Seismic Hazard Analysis Case studies and Worked examples	8

Course Information

Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second Year M. Tech., Semester I
Course Code	7ST615
Course Name	NPTEL – Optimization Methods for Civil Engineering
Desired Requisites:	Engineering Mathematics, Civil Engineering courses.

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	3 Hrs/week	**MSE**	**ISE**	**ESE**	**Total**
Tutorial	-	30	20	50	100
		Credits: 3			

Course Objectives

1	To provide knowledge of optimization approach and significance of optimization.
2	To impart knowledge of application of optimization tools required for analyzing and solving problems in civil engineering fields.
3	To provide exposure to modern techniques of global optimization for optimization of Processes/systems in engineering field in general.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO1	**Define** various optimization problems and techniques.	Remembering
CO2	**Explain** optimization problems and techniques by classifying and relating them.	Understanding
CO3	**Construct** unconstrained and constrained optimization problems using different methods	Applying
CO4	**Examine** various optimization techniques for solution of linear, nonlinear, and general optimization problems.	Analyzing
CO5	**Evaluate** various optimization problems in engineering field.	Evaluating
CO6	**Create** optimized global engineering designs of civil engineering facilities having different complexity.	Creating

Module	**Module Contents**	**Hours**
I	**Classical Optimization Techniques** Introduction: Introduction to optimization, engineering applications of optimization, Formulation of structural optimization problems as programming problems. Optimization Techniques: Classical optimization techniques, single variable optimization, multivariable optimization with no constraints, unconstrained minimization techniques and algorithms constrained optimization solutions by penalty function techniques, Lagrange multipliers techniques and feasibility techniques.	7
II	**Linear Programming:** Linear programming, standard form of linear programming, geometry of linear programming problems, solution of a system of linear simultaneous equations, pivotal production of general systems of equations, simplex algorithms, revised simpler methods, duality in linear programming.	6
III	**Non-linear programming** Non-linear programming, one dimensional minimization methods, elimination methods, Fibonacci method, golden section method, interpolation methods, quadratic and cubic methods, Unconstrained optimization methods, direct search methods, random search methods, descent method.	7

IV	**Constrained optimization:** Constrained optimization techniques such as direct methods, the complex methods, cutting plane method, exterior penalty function methods for structural engineering problems. Formulation and solution of structural optimization problems by different techniques.	6
V	**Optimization by Metaheuristic Algorithms-I** Particle Swarm Optimization, Introduction, Computational Implementation, Solution of the Constrained Optimization Problem, Ant Colony Optimization, Basic Concept, Ant Searching Behavior, Path Retracing and Pheromone, Updating, Pheromone Trail Evaporation, Algorithm. Examples-. Simulated annealing, Procedure, Algorithm, Features of the Method, Optimization	6
VI	**Optimization by Metaheuristic Algorithms-II** Genetic algorithm, Representation of design variables, Representation of Objective Function and Constraints, Genetic Operators, Algorithm flowchart, Design examples. Fuzzy Set Theory, Optimization of Fuzzy Systems, Computational Procedure, Numerical Example, Neural-Network-Based Optimization. Taguchi Method.	7

Desired Requisites:	Dissertation Phase I

Teaching Scheme		**Examination Scheme (Marks)**			
Practical	34 Hrs/week	**LA1**	**LA2**	**ESE**	**Total**
		30	30	40	100
		Credits: 17			

Course Objectives

1	To analyze/experiment selected research topic further.
2	To review, classify and consolidate observations/results based on the detailed analytical/ experimental work.
3	To document the research work in the prescribed format and present it effectively.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	**Course Outcome Statement/s**	
CO1	**Apprise** analytical/experimental work in detail for the selected research problem.	Applying
CO2	**Classify** and assess research outcomes critically.	Analysing
CO3	**Compose** and conclude the results for presentation and dissertation report writing.	Evaluating
CO4	**Author** a research paper/s and publish in reputed journal/s as a contribution to engineering fraternity.	Creating
CO5	**Invent** comprehensive solution leading to sustainable infrastructure development.	Creating

Contents

Dissertation Phase II will have the analysis of the research problem based on defined objectives. Students will present their work in two internal phases in front of evaluation committee. The end semester evaluation of the complete work will be carried out with external examiner. The external examiner should evaluate the students based on the completion of work, findings of the study, report submission, contributions to the body of knowledge (in the form of conference paper, journal paper, patent) etc.

Course Information

Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second Year M. Tech., Semester IV
Course Code	7ST645
Course Name	Internship
Desired Requisites:	Courses taught in semester I and II

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	-	**LA1**	**LA2**	**ESE**	**Total**
Tutorial	-	-	-	100	100
Practical	4 Hrs./Week	**Credits: 2**			

Course Objectives

1	To expose the students to real life engineering problems encountered in industry/society.
2	To provide an opportunity to work in collaborative and multidisciplinary environment.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO	Description	Blooms Taxonomy	
		Descriptor	Level
CO1	***Perceive*** knowledge of group dynamics and contribute to multidisciplinary work.	Understand	II
CO2	***Demonstrate*** knowledge to solve societal problems and ***apply*** it for efficient management of projects independently and in teams.	Apply	III
CO3	***Communicate*** with industry/society regarding engineering activities effectively and ***comprehend*** and write effective reports.	Understand	II
CO4	***Demonstrate*** ethical behaviour with professional code of conduct and contribute to sustainable development of society.	Apply	III

Contents

The objective of this training is to expose the students to industry environment and practices. Students are sent to leading Engineering organizations/Research laboratories/Design and Consultancy organizations to undergo a rigorous training for a minimum period of **one month** during summer term/vacation.

CO-PO Mapping

	Programme Outcomes (PO)					
	1	2	3	4	5	6
CO1					2	
CO2			2			
CO3		3				2
CO4					2	

The strength of mapping is to be written as 1: Low, 2: Medium, 3: High
Each CO of the course must map to at least one PO.

Assessment

- The assessment is based on ESE. The panel of minimum two members from the department shall assess the student for the internship.
- The students are expected to present the work done in an internship tenure.

- The students shall also submit a detailed report based on activities done in an internship and learnings through the same.

The students shall also submit the duly signed internship certificate from the organization/s where internship was done, clearly indicating the period of internship in the certificate.

Course Information

Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second Year M. Tech., Semester IV
Course Code	7ST646
Course Name	Techno-Socio Activity
Desired Requisites:	All courses of First Year M. Tech (Civil - Structural Engineering)

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	-	**LA1**	**LA2**	**ESE**	**Total**
Tutorial	-	-	-	100	100
Practical	2 Hrs./Week				
Interaction	-	**Credits: 1**			

Course Objectives

1	Develop skills like teamwork, and communication through technical contribution on socio-economic issues
2	Enhance understanding of the socio-economic impact of engineering projects and technology on society.
3	Apply engineering knowledge and problem-solving skills to address real-world challenges

Course Outcomes (CO)

At the end of the course, the students will be able to,

CO	Description	Blooms Taxonomy	
		Descriptor	Level
CO1	***Explain*** professional culture/ethics and build proficiency in professional communication, working in teams, decision making and leadership.	Understand Apply	II III
CO2	***Apply*** the technical knowledge through participation in techno-socio assignments.	Apply	III
CO3	***Demonstrate*** ethical quality and social responsibilities through the technical knowledge gained.	Evaluate	V

List of Activities

List of Activities:

1. Involvement in techno-socio activity
   a) Presentation on involvement in techno-socio activity individually/through student clubs during F.Y. & S.Y. M. Tech.
   b) Submission of summary report on these activities.
2. Techno-socio activity (Team Activity)
   a) Organization of a technical activity/event for the benefit of society in a batch.
   b) Submission of report on the organized activity.
3. Submission of certificates/documents required for student port-folio (Participation in Curricular and Extra-Curricular Activities within and outside the campus).

CO-PO Mapping						
	Programme Outcomes (PO)					
	1	**2**	**3**	**4**	**5**	**6**
CO1		3		1	3	
CO2	3	2	2	3	3	2
CO3		2	2		3	2
The strength of mapping is to be written as 1: Low, 2: Medium, 3: High Each CO of the course must map to at least one PO.						

Assessment
The assessment is based on ESE. The panel of minimum two members from the department shall assess the student for the techno-socio activity. The students are expected to present the work done in the four semesters. The students shall also submit a detailed report based on activities done and learnings through the same. The students shall also submit the duly signed certificate from the organization/s, local bodies where activities were carried out.

Prepared by Dr. P. K. Sohoni	DAC/BoS Secretary	Head/BoS Chairman

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2026-27

Course Information	
Programme	M. Tech (Civil - Structural Engineering)
Class, Semester	Second year M. Tech., Semester III
Course Code	7ST693
Course Name	Dissertation Phase - I
Desired Requisites:	Courses of Semester I and II of F. Y. M. Tech (Civil - Structural Engineering)

Teaching Scheme		**Examination Scheme (Marks)**			
Practical	22 Hrs/week	**LA1**	**LA2**	**ESE**	**Total**
		30	30	40	100
		Credits: 12			

Course Objectives

1	To impart knowledge for establishing objectives by carrying out extensive literature review on selected dissertation topics.
2	To develop methodology to execute the proposed research work through analytical/experimental work.
3	To analyse, interpret, debate, and classify the findings of the work.

Course Outcomes (CO) with Bloom's Taxonomy Level

At the end of the course, the students will be able to,

CO1	**Execute** detailed literature survey to understand research developments and set up research hypotheses.	Applying
CO2	**Construct** research methodology to evaluate the research hypothesis.	Analysing
CO3	**Assess** research idea with perspective scope.	Evaluating
CO4	**Devise** the research objectives to solve the given problem formulated through literature study.	Creating

Contents

The dissertation work will start in semester III, and should involve scientific research, design, collection, and analysis of data, determining solutions and must bring out the individual's contribution. Dissertation Phase 1 will have presentation and report submission (synopsis). The presentation will include identification of the research problem based on the extensive literature review on the topic referring to latest literature available, defining objectives of the work, and the methodology to be adopted.

AY 2026-27 and onwards

Course Information

Programme	M. Tech. Civil (Structural Engineering)
Class, Semester	Second Year M. Tech., Semester III
Course Code	7ST647
Course Name	Mini Project- I
Desired Requisites	Limit state design of steel structure, structure analysis.

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	-	**LA1**	**LA2**	**Lab ESE**	**Total**
Tutorial	-	30	30	40	100
Practical	4 hrs/week				
Interaction	-	**Credits: 2**			

Course Objectives

1	To expose the students to real-life structural engineering problems encountered in industry/society and inculcate problem-solving skills.
2	To encourage students to develop safe and economical structural solutions through experimental, analytical, and numerical studies.
3	To provide an opportunity for self-learning and life-long learning through field investigations, design practices, and use of structural engineering tools.
4	To enhance students' technical, analytical, design, and professional skills required for industry and career advancement.

Course Outcomes (CO)

CO	Description After the completion of the course, the students will be able to	Blooms Taxonomy Descriptor	 Level
CO1	**Identify and formulate** real-life structural engineering problems and define their objectives and scope.	Analyze	IV
CO2	**Collect and Analyze** the data required for the identified problem.	Analyze	IV
CO3	**Device** an appropriate structural analysis/assessment methodology using experimental, analytical, or numerical tools.	Analyze	IV
CO4	**Evaluate** the strength, stability, serviceability, and performance of structural systems through experimental, analytical, or numerical studies.	Evaluate	V
CO5	Design safe, technically sound, and economical structural solutions, including repair/strengthening measures where required.	Create	VI

List of Experiments /Activities

Course Contents

Students should select one of the following real-life structural engineering problems, preferably related to steel structures:

1. **Steel Structure Design:** Design a real-life steel structure such as an industrial shed, truss, warehouse, platform, or footbridge.
2. **Structural Assessment:** Assess the performance and condition of an existing steel structure and propose repair/strengthening measures.
3. **Structural Analysis:** Analyze an existing/proposed steel structure using analytical methods and structural analysis software.
4. **Steel Connection Design:** Analyze and design practical bolted/welded steel connections and assess their adequacy.
5. **Structural Stability/Failure Study:** Investigate problems such as buckling, excessive deflection, vibration, corrosion, or connection failure and propose remedial measures.

List of Activities

1: Problem Identification & Scoping

- Define a real-life structural engineering problem.
- Define objectives, scope, and methodology.
- Ensure the problem is distinct from the major project.

2: Data Collection

- Conduct site visits and collect structural drawings, dimensions, member sizes, loading and material details.
- Record existing structural condition and deficiencies.

3: Code, Tool & Software Selection

- Identify relevant IS codes and design guidelines.
- Select appropriate software such as STAAD.Pro, SAP2000, ETABS, MIDAS, ANSYS, or ABAQUS.

4: Experimental / Analytical Work

- Perform required field measurements, experiments, structural calculations, or numerical analysis.
- Analyze structural strength, stability, serviceability, and connections as applicable.

5: Solution Development

- Develop suitable design, repair, strengthening, or modification alternatives.
- Evaluate solutions based on safety, economy, constructability, and code compliance.

6: Documentation

- Compile observations, calculations, analysis results, drawings, and conclusions.
- Provide technically sound and actionable recommendations for implementation.

Assessment				
There are three components of Mini Project- I, LA1, LA2, and ESE IMP: ESE is a separate head of passing. ESE is treated as End Semester Exam and is based on all experiments/lab activities.				
Assessment	**Based on**	**Conducted by**	**Typical Schedule**	**Marks**

LA1	Problem identification, Data Collection, Initiation of Experimental/Analytical study	Course teacher & internal panel	During Week 1 to Week 6 Marks Submission at the end of Week 6	30
LA2	Progress of Experimental/Analytical study, Solution/Remedial measures, Conclusion	Course teacher & internal panel	During Week 7 to Week 12 Marks Submission at the end of Week 12	30
ESE	Overall study, Report, and Presentation/Oral	Course teacher & internal panel	During Week 13 to Week 18 Marks Submission at the end of Week 18	40

Prepared by Dr. A. V. Sutar	DAC/BoS Secretary	Head/BoS Chairman

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2026-27 onwards

Course Information

Programme	M. Tech. Civil (Structural Engineering)
Class, Semester	Second Year M. Tech., Semester III
Course Code	7ST648
Course Name	Mini Project- II
Desired Requisites	Courses taught in semester I and II

Teaching Scheme		**Examination Scheme (Marks)**			
Lecture	-	**LA1**	**LA2**	**Lab ESE**	**Total**
Tutorial	-	30	30	40	100
Practical	4 hrs/week				
Interaction	-	**Credits: 2**			

Course Objectives

1	To expose students to complex structural engineering problems encountered in infrastructure projects and industry.
2	To develop expertise in advanced modeling, dynamic/seismic analysis, and structural performance evaluation using industry-standard FEA software (STAAD.Pro, ETABS, MIDAS Civil).
3	To provide an opportunity for self and life-long learning.
4	To enhance students' technical and professional skills required for industry and career advancement.

Course Outcomes (CO)

CO	Description	Blooms Taxonomy	
	After the completion of the course, the students will be able to	Descriptor	Level
CO1	**Identify and formulate** real-life problem/s related to complex/special structures **and define** the scope.	Analyze	IV
CO2	**Collect and Analyze** the data or Perform load estimation required, based on relevant codal provisions for the identified problem.	Analyze	IV
CO3	**Execute** finite element modeling and analysis using software like STAAD.Pro, ETABS, MIDAS Civil etc**.**	Analyze	IV
CO4	**Evaluate** the performance of structure.	Evaluate	V
CO5	**Design** structural elements, or systems as per codal provisions considering sustainable, technical, and economical aspects.	Evaluate	V

List of Experiments /Activities

List of Activities

1: Problem Identification & Scoping

- **Define the Problem:** Select a real-life problem or complex/special structure. Ensure it is distinct from the major project.
- **Scope:** Methodology/Approach the problem (e.g., experimental work, analytical study, FEM simulation).

2: Data Collection & Codal Framework

- **Site Visits:** Conduct field visits to the selected location to understand ground realities.
- **Experimental/&Analytical Work:** Gather qualitative and quantitative data. Perform necessary field tests, laboratory experiments, or analytical calculations based on the data collected

- **Collect/Define site-specific data**, Loading data (Seismic zone,wind speed profiles, soil-structure interaction data, and moving load specifications) as per relevant Indian Standard codes (e.g., IS 1893, IS 875 Part 3, IRC 6, IRC 112).

3: Activity 3: Software Selection & FE Modeling and Analysis

- Select appropriate software (ETABS, MIDAS Civil, STAAD.Pro).

Activity 4: Structural Design & Detailing

Activity 5: Documentation & Reporting

- Compile technical design calculations, software validation outputs, cross-sectional drawings, and execution recommendations.

Sample Projects

- Seismic Analysis and Design of RC Building using F.E, software
- Health monitoring of RC building and simulation using F.E, software
- Analysis of retrofitted structure using F.E, software
- Analysis and Design of foundation using F.E, software
- Soil Structure analysis
- Seismic analysis of Elevated RC water tank
- Analysis and Design of special structures like Bridges, RC Chimney
